Copy of Report No H2 54/41 dated 10-1-1942, from the Health Officer, Bangalore City, to the Municipal Commissioner, B'lore City

-- oOo --

In enclosing copies of the letter No C 570 dated 16-9-1940 received from the Director of Public Health to the Municipal Commissioner, in regard to cyanogassing work for ready reference, I beg to state that during the current year we have had infiltration of plague inspection from the neighbouring and far off infected areas very frequently and with the sanction of the Council from time to time small establishments have been maintained on temporary service to counter-act the spread of infection in the City This has been done very successfully The proposals of the Director appear to be very sound and as he suggests the rat population will considerably be reduced and the general sanitary and economic condition of the City will also improve by such a course of destructive campaign The cyanogassing shheme has to be put into effect 2 months prior to June and as such necessary sanction has to be obtained for the maintenance of the establishment as laid out by the Director and the cost to be incurred thereon, well in advance Provision in the budget has to be made in the allotment under "Epidemic charges"

In this connection I may mention that Government are contributing a very good proportion of the cost met by the Municipality under control of Epidemics

Re Cyanogassing in Bangalore City

---

I have the honour to enclose herewith a copy of letter No C 1936 dated 21st March 1938 addressed to the Commissioner, City Municipality, Bangalore Plague has again broken out in Bangalore City I understand that 5 cases have been reported from Jally Mohalla Systematic cyanogassing work has been started in Mysore City and they will be completing the cyanogassing work very soon It would be a very great advantage to the people in Bangalore City if the cyanogassing work is systematically undertaken in Bangalore City also on an intensive scale so that the work may be completed in three months' time In the budget mentioned in my letter, quoted above, 30 labourers at Rs 10/- each has been provided and two Sanitary Inspectors on Rs 50/- each I think I can give Assistant Sanitary Inspectors on Rs 25/- each for carrying on the work The labourers may be converted into ten gangs of 3 each, one of whom may be engaged as a maistry

svs

Letter No C 1936 dated 21st March 1938, from the Director of Public Health in Mysore, Bangalore, to the Commissioner, City Municipality, Bangalore

-- oOo --

I have the honour to state that Bangalore has been endemic for plague ever since plague first broke out in the City

The Municipal Health Organisation in its fight against plague in the City were adopting the following measures

1 Inoculation of people in the infected localities

2. Disinfection of houses

3 Destruction of rats by the use of traps and by hand catching on payment of a small remuneration as an inducement No systematic anti-rat campaign has ever been organised and plague has continued to recur year after year in the City

Last year a beginning was made, more as a demonstration, to destroy rats and bandicoots systematically by the use of Cyanogas in Cheluvadipalya when cases of plague were reported from this section of the City The demonstration was organised by the Department with the help of the local Municipal Health Staff

As plague breaks out every year in the month of June it is desirable to start the anti-rat campaign at least 2 months ahead so that the rat population may be reduced to such an extent that when the season is due to start, the chances of infection being conveyed from rat to rat may be almost negligible

The Municipality is now maintaining a disinfection gang, a disinfection Inspector and an Inoculating Officer The same staff suitably augmented may be utilised for this work There are in Bangalore City about 25,000 houses If the whole of the city is covered to be/in a period of 2 months starting in April, the staff required will be at least 15 units of 3 labourers each, working under the supervision of two trained Sanitary Inspectors in addition to the already existing disinfection Inspector Provision has also to be made for equipment and material

The details of the cost of the scheme as proposed is appended This proposal will not only reduce the rat population but also give a chance for every house in the City to be cleaned up necessarily and thus improve the general sanitation of the City

The Municipality has at present provided Rs 13,500/- in the budget

in the budget for epidemic charges The working expenditure for the above scheme will be Rs 2,400/- The extra cost involved, in addition to maintaining the existing disinfection gang is, I am sure will worth the expenditure in view of the not only getting rid of the annual plague visitation but also in avoiding the hitherto uncalculated devastation by the rat population of grains and merchandise

I hope this will meet with your earnest consideration and that you will be able to get the necessary consent of the Municipal Council as early as possible so that the work may be started without any undue delay.

---

Budget details

| | |
|---|---|
| 30 labourers at Rs 10/- each a month for 3 months | Rs 900/- |
| 2 Sanitary Inspectors on Rs 50/- a month for 3 months | 300/- |
| 20 Cyano-gas pumps | 450/- |
| Cyanogas | 750/- |
| Total | Rs2400/- |
